

KUMON[®] connections

NEWS FROM THE SEATTLE- UNIVERSITY VILLAGE CENTER

Dear Kumon Parents,

Summer is finally here! We hope your days are more relaxed and filled with lots of fun. We are glad that Kumon is part of your summer routine.

According to studies in the Journal of Educational Research, children can lose approximately 2.6 months of knowledge if not provided with any educational stimulation over long breaks. Educational enrichment programs such as the Kumon Method are a proven way to keep students' minds engaged and focused on retaining knowledge year round, especially between grade levels.

Summer is an optimal time to start a supplemental education program such as Kumon to ensure children do not fall behind in school during long breaks. Kumon's individualized math and reading programs are tailored to each student with short, daily assignments and consistent practice that build a thorough understanding of topics, strong work ethics, concentration, and self-learning. Students work at their own pace, strengthening each skill before moving on to the next. Through repetition, students gain confidence, build skills, retain vital information and begin each school year fully prepared and even ahead of their peers.

From counting to calculus and basic phonics to advanced reading comprehension, students of all grade levels progress at a pace that's right for them, while they develop a love of learning. Founded in Japan in 1958, the Kumon Method uses an individualized approach that helps children develop a solid command of math and reading skills.

Plus, students only need to do about 10-15 minutes per subject per day. This manageable amount helps students stay on track and move ahead over the summer, retaining and building important skills, while leaving 23 hours left each day for fun in the sun!

My staff and I are looking forward to a great summer with our amazing UVillage students and families!

Warm regards,

Jeannie Ianelli
